

ABSTRACT

An injectable composition comprising a combination of
2-[[[3-methyl-4-(2,2,2-trifluoroethoxy)-2-
5 pyridinyl]methyl]sulfinyl]-1H-benzimidazole (lansoprazole),
its optically active compound or a salt thereof, and a
chelating agent, which is used at pH 9 to 12. The
injectable composition is excellent in stability and
solubility, and has such a high-quality that particulate
10 insolubles are not formed when the composition is kept and
supplied in a glass container and even in a plastic
container and also when the composition is kept in these
container for a long time.
